

The ARC Project

ASSESSMENT - ROADMAP - COACHING

INCREASE YOUR BUSINESS' PERFORMANCE & BOTTOM LINE

The ARC...

is intended for companies who are committed to and focused on their growth. The ARC walks a company through an **A**ssessment, **R**oadmap and **C**oaching program that introduces the fundamental and advanced principles of productivity and process improvement. It delivers clear recommendations and an action plan for growth and continuous improvement.

Through the ARC, participating companies have achieved significant improvements in key business areas.

“GO Productivity helped us realize nearly \$100,000 dollars in annual savings, a 6% reduction in inventory costs, and a 15% reduction in non-productive lost-time.”

Robert Stegmeier
Kaymor Grande Prairie, Alberta

“The Most Valuable thing to come from the Productivity ARC was the identification of firm things to look at from a strategic standpoint, and what tactics we can take to make the improvements happen.”

Justin Hogeterp
Fluid Media Technologies, Hamilton, Ontario

“Our entire company is now focused, on fire, and poised to achieve our goal!”

Rachel Ross
Mandala Homes, Nelson, British Columbia

THE ARC

ASSESSMENT | ROADMAP | COACHING

The ARC helps companies at any stage of their productivity journey to improve their competitiveness and cultural alignment

It creates the foundation for a company to build productivity capacity and is executed through three key components:

ASSESSMENT

Clarity around the current state of your business and identification of gaps

ROADMAP

A clear plan and priority around specific opportunities for improvement

COACHING

Building capacity within the team to leverage higher levels of innovation and productivity

ASSESSMENT

From the very first conversation with the leadership team, GO Productivity begins the process of examining the business and what the perceived current challenges are that may be restricting or obstructing productivity and growth. After aligning a working group within the organization to be engaged in the ARC process, a formal assessment is administered via our online Productivity Assessment Tool (PAT). The assessment leverages the expertise and various perspectives of those several key personnel who are participating in the working group to build clear understanding and awareness around what the gaps (and strengths) are.

ROADMAP

After a thorough analysis of the assessment results, GO Productivity utilizes several different tools to help the working group construct the productivity roadmap. This includes identifying specific productivity improvement opportunities that create value and eliminate waste. It also includes a series of both process and product innovations that have the potential to help the business make exponential leaps in efficiency and growth. The resulting plan is embedded with buy-in from the group, with clear accountabilities and timelines are set.

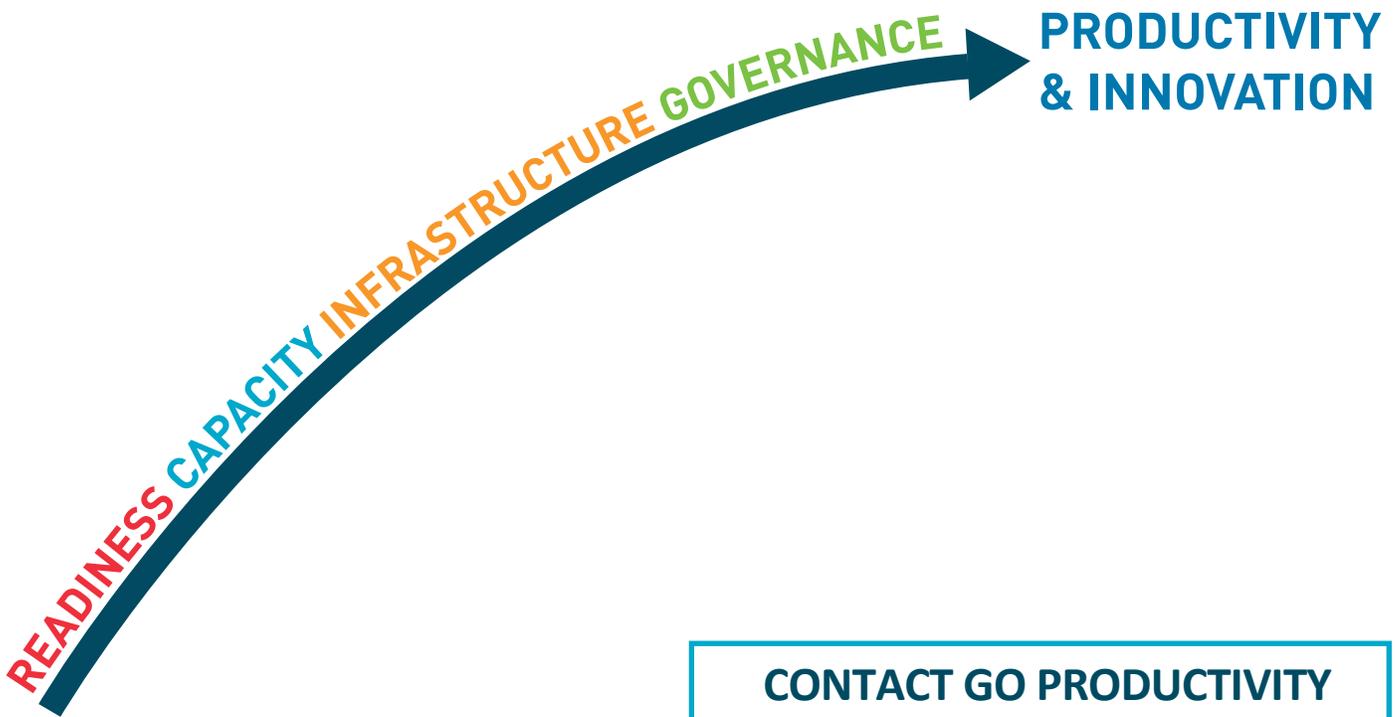

COACHING

Over the course of the ARC, GO Productivity is working actively to build innovation and productivity improvement capacity within the organization. Problem solving tools and techniques, collaboration strategies, improvement methodologies, and leadership concepts are shared continuously and effectively over the course of the engagement. GO Productivity utilizes the ARC process to help a company incite, manage, implement, and ultimately own positive change in their organization.

Why your company needs The ARC...

- Increased profit
- Decreased costs
- Develop effective people and teams
- Improve your efficiency and effectiveness
- Build a sustainable productivity program in your organization
